

AUSTRALIAN LIGHTING EQUIPMENT REGULATIONS

LIGHT TECHNICAL BRIEF

All electrical lighting equipment and suppliers (importers, manufacturers and re-sellers) must comply with Australian state and federal acts, regulations and standards. These may include, and are not limited to:

- Electrical safety regulations – www.erac.gov.au
- Electro-magnetic compatibility regulations – <http://www.acma.gov.au>
- Energy efficiency regulations – <http://www.energyrating.gov.au>
- Competition and consumer laws – <https://www.accc.gov.au>
- Country of origin laws - www.border.gov.au
- Building Standards – www.abcb.gov.au

Some of the above regulations require company and/or product approvals, registration, testing, marking, and declarations. The requirements are risk-based and depend on the type of product supplied.

Australian and international standards such as AS/NZS 60598 (series), AS/NZS 3820, AS/NZS 4417 and CISPR 15 are mandated within the above regulations. These standards are available for purchase at www.saiglobal.com.au

The above regulations and standards are the minimum mandatory legal requirements for products, companies and individuals. Other standards may apply for specialist area products. Product suppliers are liable for the cost of product recalls and rectification works if they supply non-conforming products to the market and those products need to be recalled. <http://www.recalls.gov.au>

Supplier companies and individuals in Australia are responsible for product alterations (e.g. component substitution or removal) regardless of whether manufacturers advised suppliers or not. Lighting Council advises all suppliers to have audit systems in place.

A licensed electrical contractor is required to repair, service or install any light fitting, driver (power supply) or dimmer that is attached to the 240V mains power. Electrical contractors are responsible for installation safety and must refuse to install non-compliant products.

Sale and installation of non-compliant products or installation by unqualified persons can result in electric shock, death, fire, property damage, interference issues, penalties (including recalls) and fines.

About Lighting Council Australia

Lighting Council Australia is the peak body for Australia's lighting industry. Its members include manufacturers and suppliers of luminaires, lighting control devices, lamps, solid state lighting and associated technologies. Lighting Council's goal is to encourage the use of environmentally appropriate, energy efficient, quality lighting systems. Lighting Council Australia members should be contacted directly regarding their services and products.
