

Lighting Council News – New Lighting Education Provider

2020 will be the year remembered for COVID pandemic making it necessary for most of us to embrace new solutions in the way we communicate. In many industries it has also changed the way we work. This is particularly relevant when it comes to the Education sector with many providers (Schools, Colleges, TAFE's, Universities) having to abandon traditional face to face learning arrangements.

Hence the evolvement of the International College of Lighting based in Sydney, which has been developed to deliver a new era of Online Lighting Education. **ICOL** has taken the time to develop a unique new method of training which will not only assist people new to the Lighting Industry to learn key lighting concepts and how they should be applied at their own pace but also teach more experienced Industry people to view Lighting in a more creative and sustainability way with their Education Programs.

Online learning has proven success of assisting participants to retain the knowledge when delivered in a more relaxed environment.

Fundamentals of Light ONLINE Learning is best suited to people new to the Industry and will teach participants essential Lighting Science and Language. Creative Lighting Application is for people who want to unlock "Natures" lighting design secrets.

ICOL's Training Courses consist of over 70 Lessons, Power Points, Videos and Quizzes. The Workshops offer additional learning material and exercises to support the key subjects while maintaining the human connection of our Professional Facilitator, David Boyd to provide support and interaction to further embed the learning.

Fundamentals of Light Live Zoom Workshops run every month - next date 30th March 2021

Creative Lighting Application Live Zoom Workshop also runs every month next date - 13th April 2021
